

Exercise

José aims to create a website for tourists in Oporto. His aim is that tourists will be able to see a list of the most emblematic locations, through images. By clicking on one of these images, the user will see another page with several photos and some information about that particular location. Furthermore, the user can write comments about that location. Those comments will only appear after administrator's acceptance. For this, the administrator must be authenticated.

1. Identify José goals for the system.
2. Draw the system use cases model.
3. Write a scenario that validates the identified goals.
